

This data model is designed to track, analyze, and report on cumulative count of Reach and Impressions for a Campaign. Accumulation will happen from Platform campaign start Dt to PERFORMANCE_DAY_DT.

Fact Table F_AD_PLATFORM_CAMPAIGN_RF_TREND holds the cumulative count of Reach and Impressions for a Campaign .It maintains Cumulative data at campaign level with daily loads. Important to note as these counts are cumulative per date . Any aggregation to have data at higher granularity level will output inaccurate numbers.

Whereas, F_AD_PLATEFORM_SOCILA_RF_TREND holds the cumulative count of Reach and Impressions for a Advertisement Unit or Ad unit of a Campaign depending on Platform. table maintains Cumulative data at a detailed, low-granularity level with daily loads. Important to note as these counts are cumulative per date . Rolling up is not supported any aggregation attempt to have data at higher granularity level will output inaccurate numbers.
